Executive Dashboard

# Business Insights & Recommendations

**Sales Performance:** Technology is the strongest sales-generating category, indicating that it is a key contributor to overall revenue.

**Profitability:** The most profitable regions should be prioritized for expansion while lower-profit regions should be reviewed for pricing, discount, and operating efficiency.

**Customer Segments:** Consumer, Corporate, and Home Office customers contribute differently to sales, helping identify the segments with the greatest revenue potential.

**Sales Trend:** Monthly sales patterns help identify periods of stronger and weaker demand and can support future sales planning.

## Business Recommendations

**1. Prioritize Technology Sales**
Technology is the strongest sales-generating category, so the business should continue investing in high-performing technology products and related promotions.

**2. Improve Central Region Profitability**
Central is the only region showing negative profit in the dashboard. Review discounting, pricing, product mix, and operating costs in this region.

**3. Focus on High-Value Customer Segments**
Consumer customers contribute the largest share of sales, so targeted campaigns and retention strategies can help maximize revenue from this segment.

**4. Use Sales Trends for Planning**
The dashboard shows a **20.4% Sales Growth** and **12.5% Profit Margin** in the current dashboard view. Monthly trends should be used for inventory, marketing, and sales planning.
